

Adjustable Insulator Adapters

2 models available; AIA-CF & AIA-J

AIA-CF adjusts to fit most insulators with neck dia. for 2-1/8" through 3-1/2"

AIA-J adjusts to fit most insulators with neck dia. for 3-1/4" through 4-7/8"

Fits all S+R XS-100-B blocks

The AIA-CF and AIA-J adapters clamp securely to a tie-top insulator by tightening the take-up handles. Natural rubber cushions permanently molded to the adapter protect the porcelain and restrict the adapter from rotation. The XS-100-B block can be mounted in the adapter vertically and at various angles to facilitate stringing tangents and angles.

Using the AIA adapters and XS-100-B, reconductoring is possible using the "Never-An-Outage-System," as the conductor can be energized while in the block. These AIA adapters and XS-100-B block combination can also be used for conventional stringing on crossarms, on new construction, and on vertical or horizontal post insulators.

For larger than 4-7/8" or smaller than 2-1/8" neck diameter insulators, other adapters are available on request. Also available is Model No. AIA-4 Special with 3/4" hex head (instead of standard hand knob) ideal for use with hydraulic tools.

Fittings for Distribution Blocks

May be used with any Sherman + Reilly block that has a socket connector.

6 options available.

Strong, durable, and weather-resistant materials.

Fits S+R XS-100B blocks.

Fittings are small bits of hardware that are used to hang/suspend blocks from supports. Fittings mate with the socket connector at the top of the block frame by simply sliding/snapping the fitting's ball-eye into the socket of a socket connector. The other end of the fitting then mates with whatever the supporting hardware may be: for example, a hook, a bracket, or over a cross-arm or an insulator using webbing loop of a "Noose."

Six options available:

- No. 1 Hook
- No. 1 Hook with gate/clasp
- No. 6 Oval Eye
- No. 8 Clevis
- Model 3030 Fitting
- Model N3306Y Noose
